1.8 Systematic Investment Plan (SIP)

A Systematic Investment Plan (or SIP) is a smart and easier mode of investment through which someone can invest a fixed amount every month (or any other interval) in a mutual fund. As the term indicates, it is a 'systematic method' of investing a fixed amount of money periodically. The periodic interval can be weekly, bi-weekly, monthly, quarterly, semi-annually or even annually. When you invest steadily in this manner, it can become easier to meet your financial goals as the wealth grows over the course of time.

Benefits of Investing in SIP

- i. **Long-term orientation:** Compounding occurs when the returns you earn on your investments start earning returns over a long term. This is a fundamental concept of finance, and its practical implications can have a substantial impact. When you invest regularly through SIPs, your returns are reinvested. Over time, that may increase your potential returns manifold. An ideal way to maximize this gain is to invest for an extended period. This also means that you may benefit from investing as early as possible.
- ii. **Low Initial Investment:** An investor can invest in Ventura AMCL Balanced Fund through a SIP with just BDT 1,000 per month. This can be an affordable way to invest monthly without hurting the wallet.
- iii. **Flexible Tenure:** An investor can plan a SIP with investment horizon of any length. The periodic interval for making payment can be weekly, bi-weekly, monthly, quarterly, semi-annually or even annually. A SIP of a shorter tenure can be upgraded into a longer one at any point in time during the continuity of the former plan.
- vi. **Cumulative Investment Plan (CIP) for SIP:** SIP investors can either choose to receive cash dividend or CIP. If CIP (i.e.: dividend reinvestment process) is chosen instead of a cash dividend, investors will be credited with the units of the fund instead of cash dividend payment. Following the CIP conversion, the investor will be entitled to dividends on the total number of units in the immediate next year (if available).

v. **Tax Benefits:** The investment tax benefits of the Fund will be available to both SIP investors and one-off investors as offered by the country's Finance Act and Income Tax Act, 2023. Currently, the following benefits are available:

- Yearly investments of up to BDT 500,000.00 (taka five hundred thousand) in the fund is allowed to be recognized as eligible investments under Clause 2(7)(b) of Sixth Schedule (Part 3) of Income Tax Act, 2023;
- Up to 15% of the investments in the fund can be claimed as tax rebate under Section 78 of the Income Tax Act, 2023;
- According to the Sixth Schedule (Part 1) of the Income Tax Act, 2023 the income of the Fund will be exempted from Tax at the fund level.

Buy and Surrender SIP Process:

An investor can invest in Ventura AMCL Balanced Fund through any of the following options:

- a. The investor can invest through SIP by an auto debit system provided against the investor's bank account of "Ventura AMCL Balanced Fund";
- b. The investor may provide post-dated account payee bank cheques in favor of "Ventura AMCL Balanced Fund" to the asset manager or the selling agents at a regular interval (monthly, quarterly, yearly, etc.).

Once the fund's bank account is credited, the unit holder will receive a confirmation of unit allocation against every unit purchase. Soon after, the units will be created and credited to the investor's BO ID following the due process.

VENTURA AMCL BALANCED FUND

CHAPTER 02

BACKGROUND

2.1 Preamble for the formation of Ventura AMCL Balanced Fund

A Mutual Fund is an investment vehicle that collects money from investors who share a common financial goal, and invest the proceeds in different asset classes, as defined by the investment objective. It is a financial intermediary, set up with an objective to professionally manage the money pooled from the investors at large.

The pooling of resources is the biggest strength for mutual funds. The investors of the mutual funds can enjoy economies of scale and purchase stocks or bonds at a much lower trading costs compared to direct investing in capital markets. The relatively lower amounts required for investing into a mutual fund scheme enables small retail investors to enjoy the benefits of professional money management and provide access to different markets, which they otherwise may not be able to access.

An investor in a mutual fund scheme receives units which are in accordance with the quantum of money invested by him. These units represent an investor's proportionate ownership into the assets of a scheme and his liability in case of loss to the fund is limited to the extent of amount invested by him.

Ventura Asset Management Company Ltd., a new generation asset management company managed by a group of renowned investment professionals having a strong track-record in Fixed Income Securities (FIS) market is committed to provide its investors the benefits of the fixed income segment along with the equity market segment of Bangladesh Ventura Asset Management Company Ltd. is committed to launch its first ever balanced fund which will provide its investors a consistent and steady return having a lower standard deviation.

The sector has been shaped by a mix of market dynamics, regulatory frameworks, and an increasing focus on financial literacy, which collectively contribute to its stability and appeal. Despite market fluctuations, mutual funds have continued to offer investment options across various risk profiles, catering to both institutional and retail investors.

Mutual Funds can play a significant role in channeling unorganized retail funds to institutional funds in the capital market in Bangladesh. Ventura AMCL Balanced Fund is committed to providing the institutional expertise required to manage those funds coming towards the institutions.

Fair value is the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date. A fair value measurement shall be done for a particular asset or liability. A fair value measurement assumes that the transaction to sell the asset or transfer the liability takes place either in the principal market for the asset or in the absence of the principal market, in the most advantageous market for the asset or liability.

 - b) it is a financial asset measured at fair value through other comprehensive income;

At subsequent balance sheet dates, if the fair value of the financial asset further decreases, a new provision to that extent shall accrue with respect to that particular financial asset. VENTURA AMCL BALANCED FUND

CHAPTER 04

RISK FACTORS AND INVESTMENT APPROACH & RISK CONTROL

Risk Factors

Investing in the Ventura AMCL Balanced Fund (hereinafter the Fund) involves certain risks that investors should carefully consider before investing in the Fund. There is no assurance that the Fund will achieve its mentioned investment objectives. The Fund value can fluctuate and no assurance can be given that investors will receive the amount originally invested. The Fund is suitable for investment by the investors who understand the risks involved and are willing to assume the risks associated. Investors should carefully consider the risk factors outlined below:

A. General Risk

There is no guarantee that the Fund will be able to meet its investment objective and the investors may potentially incur losses, including loss of principal when investing in the Fund. Mutual funds and securities investments are subject to market risks and there can be no assurance that the Fund's objective will be achieved. Investors should study this Offer Document carefully before investing. Due to the fluctuation of the price/ value/ interest rates of the securities in which Scheme invests, the value of investment in the Scheme may go up or down depending on the various factors and forces affecting the capital markets and money markets.

B. External Risk Factor

The performance of the Fund is substantially dependent on the macro-economic situation and capital market as well as the money market of Bangladesh. Political and social instability may have an adverse effect on the value of the Fund's assets. Adverse natural calamities may impact the performance of the Fund.

C. Market Risk

Bangladesh capital market is highly volatile and mutual fund prices and prices of securities can fluctuate significantly from their respective fundamental value estimates, at times for prolonged period. The Fund may lose its value or incur a sizable loss on its investments due to such market volatility. Stock market trends indicate that prices of majority of all the listed securities move in unpredictable direction which may affect the value of the Fund. Furthermore, there is no guarantee that the market prices of the units of the Fund will fully reflect their underlying Net Asset Values.

D. Concentration Risk

Due to a limited number of high-quality listed securities in both the DSE and CSE, it may be difficult to invest the Fund's assets in a widely diversified portfolio of securities as and when required to do so. Due to a very narrow and highly thin secondary fixed income/debt market in Bangladesh has not been supporting the Asset Manager to design and implement optimum asset allocation decisions from time to time. Limited options in the money market instruments will narrow the opportunity for short-term or temporary investments of the Fund which may adversely impact the returns.

E. Dividend Risk

Despite careful investment selection of companies in the Fund, if the securities fail to generate the expected income or dividend, or fail to disburse interest income, principal repayment, or dividends declared on time that will impact the income and the overall return of the Fund. Regulators may impose a limit/ cap on the ability of the investee companies to declare dividends, which in turn may impact the income and the overall return of the Fund.

F. Underlying Liquidity Risk

For investing in Pre-Public Offer Placement securities i.e.: in the unlisted debt or equity securities by the Fund, may involve liquidity risk. In addition, market conditions and investment allocation may have an impact on the ability to sell securities during periods of market volatility. Debt securities, while somewhat less liquid, lack a well- developed secondary market, which may restrict the selling ability of the Fund, and may lead to the Fund incurring losses till the security is finally sold. While securities listed on the stock exchange carry lower liquidity risk, the ability to sell these investments is limited by the overall trading volume on the stock exchanges and may lead to the Fund incurring losses till the security is finally sold.

G. Investment Strategy Risk

Since the Fund will be an actively managed investment portfolio; the Fund performance will remain subject to the investment management strategy risk. The AMC will undertake rigorous investment research and risk management exercise at all the time; however, there can be no guarantee that such process and techniques will produce the desired outcome.

H. Credit Risk

Since the Fund will seek to also invest as per the সিকিউরিটিজ ও এক্সচেঞ্জ কমিশন (মিউচুয়াল ফান্ড) বিধিমালা, ২০০১, in fixed income securities; the credit risk of the fixed income issuers is also associated with the Fund. Investment in fixed income securities is subject to the risk of an issuer's inability to meet interest and principal payments on its obligations and market perception of the creditworthiness of the issuer.

I. Interest Rate Risk

The Net Asset Value (NAV) of the Fund, is directly related to any changes in the general level of interest rates. The NAV is supposed to fall with a rise in the level of interest rates to the extent it is invested in fixed income securities (debt and money Market securities). Zero coupon securities do not provide periodic interest/ principal payments to their investors hence they are more sensitive to changes in interest rates.

J. Issuer Risk

In addition to market and price risk, value of an individual security can, in addition, be subject to factors unique or specific to the issuer, including but not limited to corporate governance risk, management malfeasance, accounting irregularities, unfavorable changes in management team or management strategy leading to corporate under-performance. Such risks can develop in an unpredictable way and can only be partially mitigated, and sometimes cannot be mitigated at all by thorough research or due diligence. To the degree that the Fund is exposed to a security whose value declines due to issuer risk, the Fund's value may be impaired.

K. Liquidity Risk

The Fund can be exposed to market liquidity risks given the lower liquidity levels for debt securities, in general. Additionally, untimely significant redemption of Fund-units by existing investors may add to overall level of liquidity risks for the Fund beside dragging performance.

Investment Approach and Risk Control

Top-down and bottom-up approaches may adopt the following investment approaches and risk control measures.

- i. Investments will be pursued in selected sectors based on the analysis of business cycles, regulatory reforms, competitive advantage, etc.
- ii. The Asset Management Company in selecting scrips will focus on the fundamentals of the business, the industry structure, the quality of management, sensitivity to economic factors, the financial strength of the company and key earnings drivers.
- iii. In addition, the Asset Management Company will study the macroeconomic conditions, including the political and economic environment and factors affecting liquidity and interest rates.
- iv. Since disciplined investment management requires strong risk management, the Asset Management Company would incorporate adequate safeguards for controlling risks in the portfolio construction process
- v. Risk will also be reduced through adequate diversification of the portfolio. Diversification will be achieved by spreading the investments over a range of industries/sectors.
- vi. The Asset Management Company in selecting Government Securities will focus on the maturity and yield of the Government Securities, the Monetary policies of the Government, and the Fiscal policies of Bangladesh Bank and its changes actual or impending in making such decisions.
- vii. Market risk will be managed through maintaining a dynamic balance between securities and cash.
- viii. Liquidity risk will be managed by investing across the yield curve.
- ix. Credit risk will be managed through regular credit evaluation, monitoring and observation of rating migration during the tenure of investment.

A Hybrid of Top-down and Bottom-up approaches:

A hybrid approach of Top-down and Bottom-up approaches will be deployed for determining the capital market expectation and subsequently developing the Strategic Asset Allocation. The approach will not only attain optimizing exposures to various asset classes, economic and risk factors, etc., but also focus on security-specific analysis to find out the most attractive securities from each asset class. Its major focus will be on:

- Picking up the most suitable asset classes and sectors based on macroeconomic outlook. Factors such as economic growth outlook, business cycle, economic parameters such as inflation, interest rate etc., financial market outlook, policy changes (fiscal and monetary) will be taken into consideration.
- The company follows value investment philosophy and therefore focuses on identifying mispriced securities.
- Quality of Corporate governance features at the top of the list of investment criteria.

Asset Allocation & Security Selection:

The next step would be to identify attractive mispriced securities from different asset classes/sectors based on thorough research.

Investment Research & Analysis:

- Securities from various sectors will be screened to establish a universe based on pre-established criteria (e.g. quality of governance, economic moat, sustainable competitive advantage, financial stability, sustainability of debt, revenue/business model, capital structure, quality of the management/leadership, credit quality, historical track record etc.)
- Deploying various financial modelling technique and other valuation tools, the securities will be analyzed, and their performance will be estimated for the foreseeable future.
- The forecast will then be translated into a value (called intrinsic value) following appropriate valuation models.
- Based on the intrinsic value reached through research, it will be identified that how mispriced the security currently is and what would be the margin of safety.
- After appropriate review by the investment committee, a decision will be taken.
- The research on every security will continue and be updated accordingly. The investment committee will decide upon any rebalancing needs.
- Portfolio monitoring & risk management: IC will monitor business and repayment performance of the portfolio companies/ issuers on continuous basis and will rebalance portfolio as and when needed to achieve investment objectives. IC will determine appropriate risk management strategy for individual securities and at the portfolio level, too.

- The implementation process should have proper trade execution policy in order to exert the fiduciary responsibility of ensuring investor's best interest.
